

A virtual tour is an interactive "walk-through" style method of showing pictures of a location or property. Ideally a virtual tour should comprise of many 360 degree panoramic shots of a location, all presented nicely in an easy to navigate user interface.

These tours can help potential buyers / renters get a good idea of the spaciousness / feel of a property before they visit. Some investors from overseas may find this type of product very useful for purchasing Australian property, which gives our tours the potential to increase international sales as well as local exposure.
